Small mixer with big benefits

The GMS 140 C is the latest addition to the assortment of Gericke Multiflux® batch mixers distributed by Power Technologies, Inc. The smallest Gericke double shaft mixer, it features a useable volume of 40 to 100 liters ideal for premixing and small production batches. Its compact mixer housing delivers an extremely short mixing time resulting in faster mixing cycles. As part of the Multiflux series, the GMS 140 forms a mechanical fluid bed with 2 horizontally arranged comb-type agitators. This means that the mixing process is fast and gentle and yields a high-quality product. Up to 12 mixing cycles per hour are possible.

The bearings on one side of the agitator allow the complete front panel of the mixer to be opened offering outstanding accessibility for cleaning. The short length of the mixing chamber allows full and easy access to the agitator and mixing chamber. The mixer shafts on the drive side have the proven fast-cleaning gaskets of Gericke, which can be dismantled, cleaned and reassembled in the shortest possible time.

PTI has a fully equipped and staffed test facility with Gericke nibblers, feeders, mixing and centrifugal sifting equipment.
